# PRODUCTION OF PROSODY IN AUTISTIC ADULTS

## ABOUT THE STUDY:

I am a PhD student working on my dissertation which aims at **giving voice to the autistic community**.

In my study, I try to find patterns that could help describe the speech of autistic adults. These patterns will help to better understand autistic people and could potentially indicate bio markers of autism.

## WE ARE LOOKING FOR:

- Autistic adults (with a clinical diagnosis of autism).
- 18 years or older.
- Born and brought up in the UK .
- Do not have a diagnosis of dyslexia or any other language-related conditions.

## HOW CAN I JOIN?

Scan this QR code to fill in a short survey. You can also email the researcher
